

KOPKA RIVER PROVINCIAL PARK

Sparkling Lake to Obonga Lake

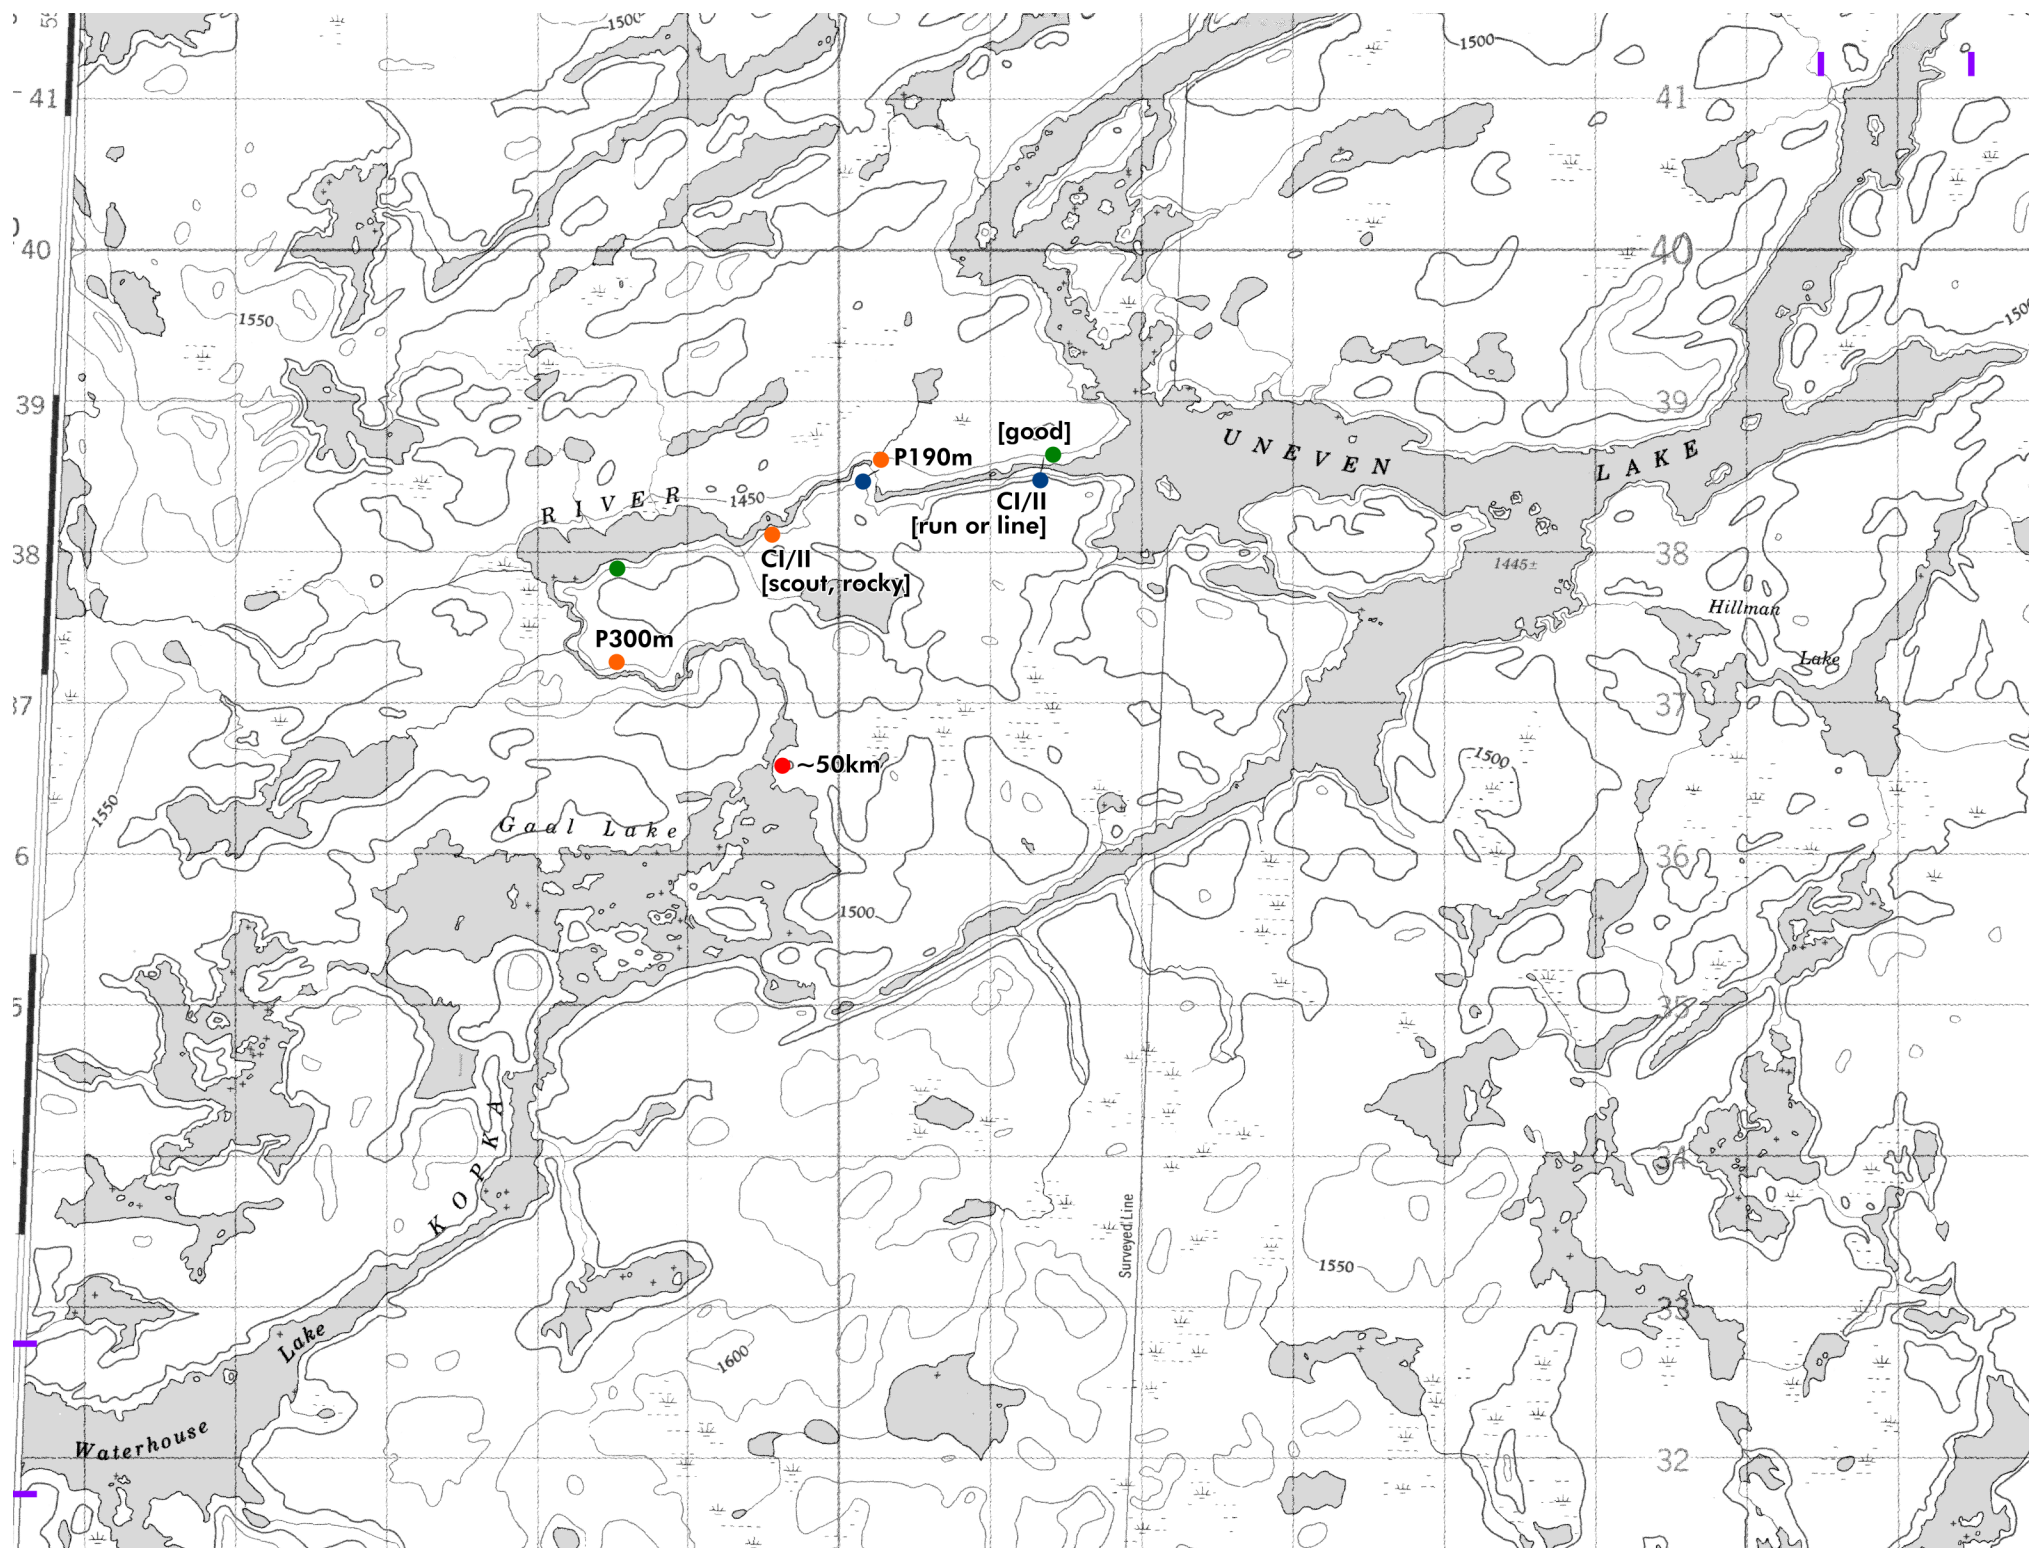

1:50000 Route Map and Notes

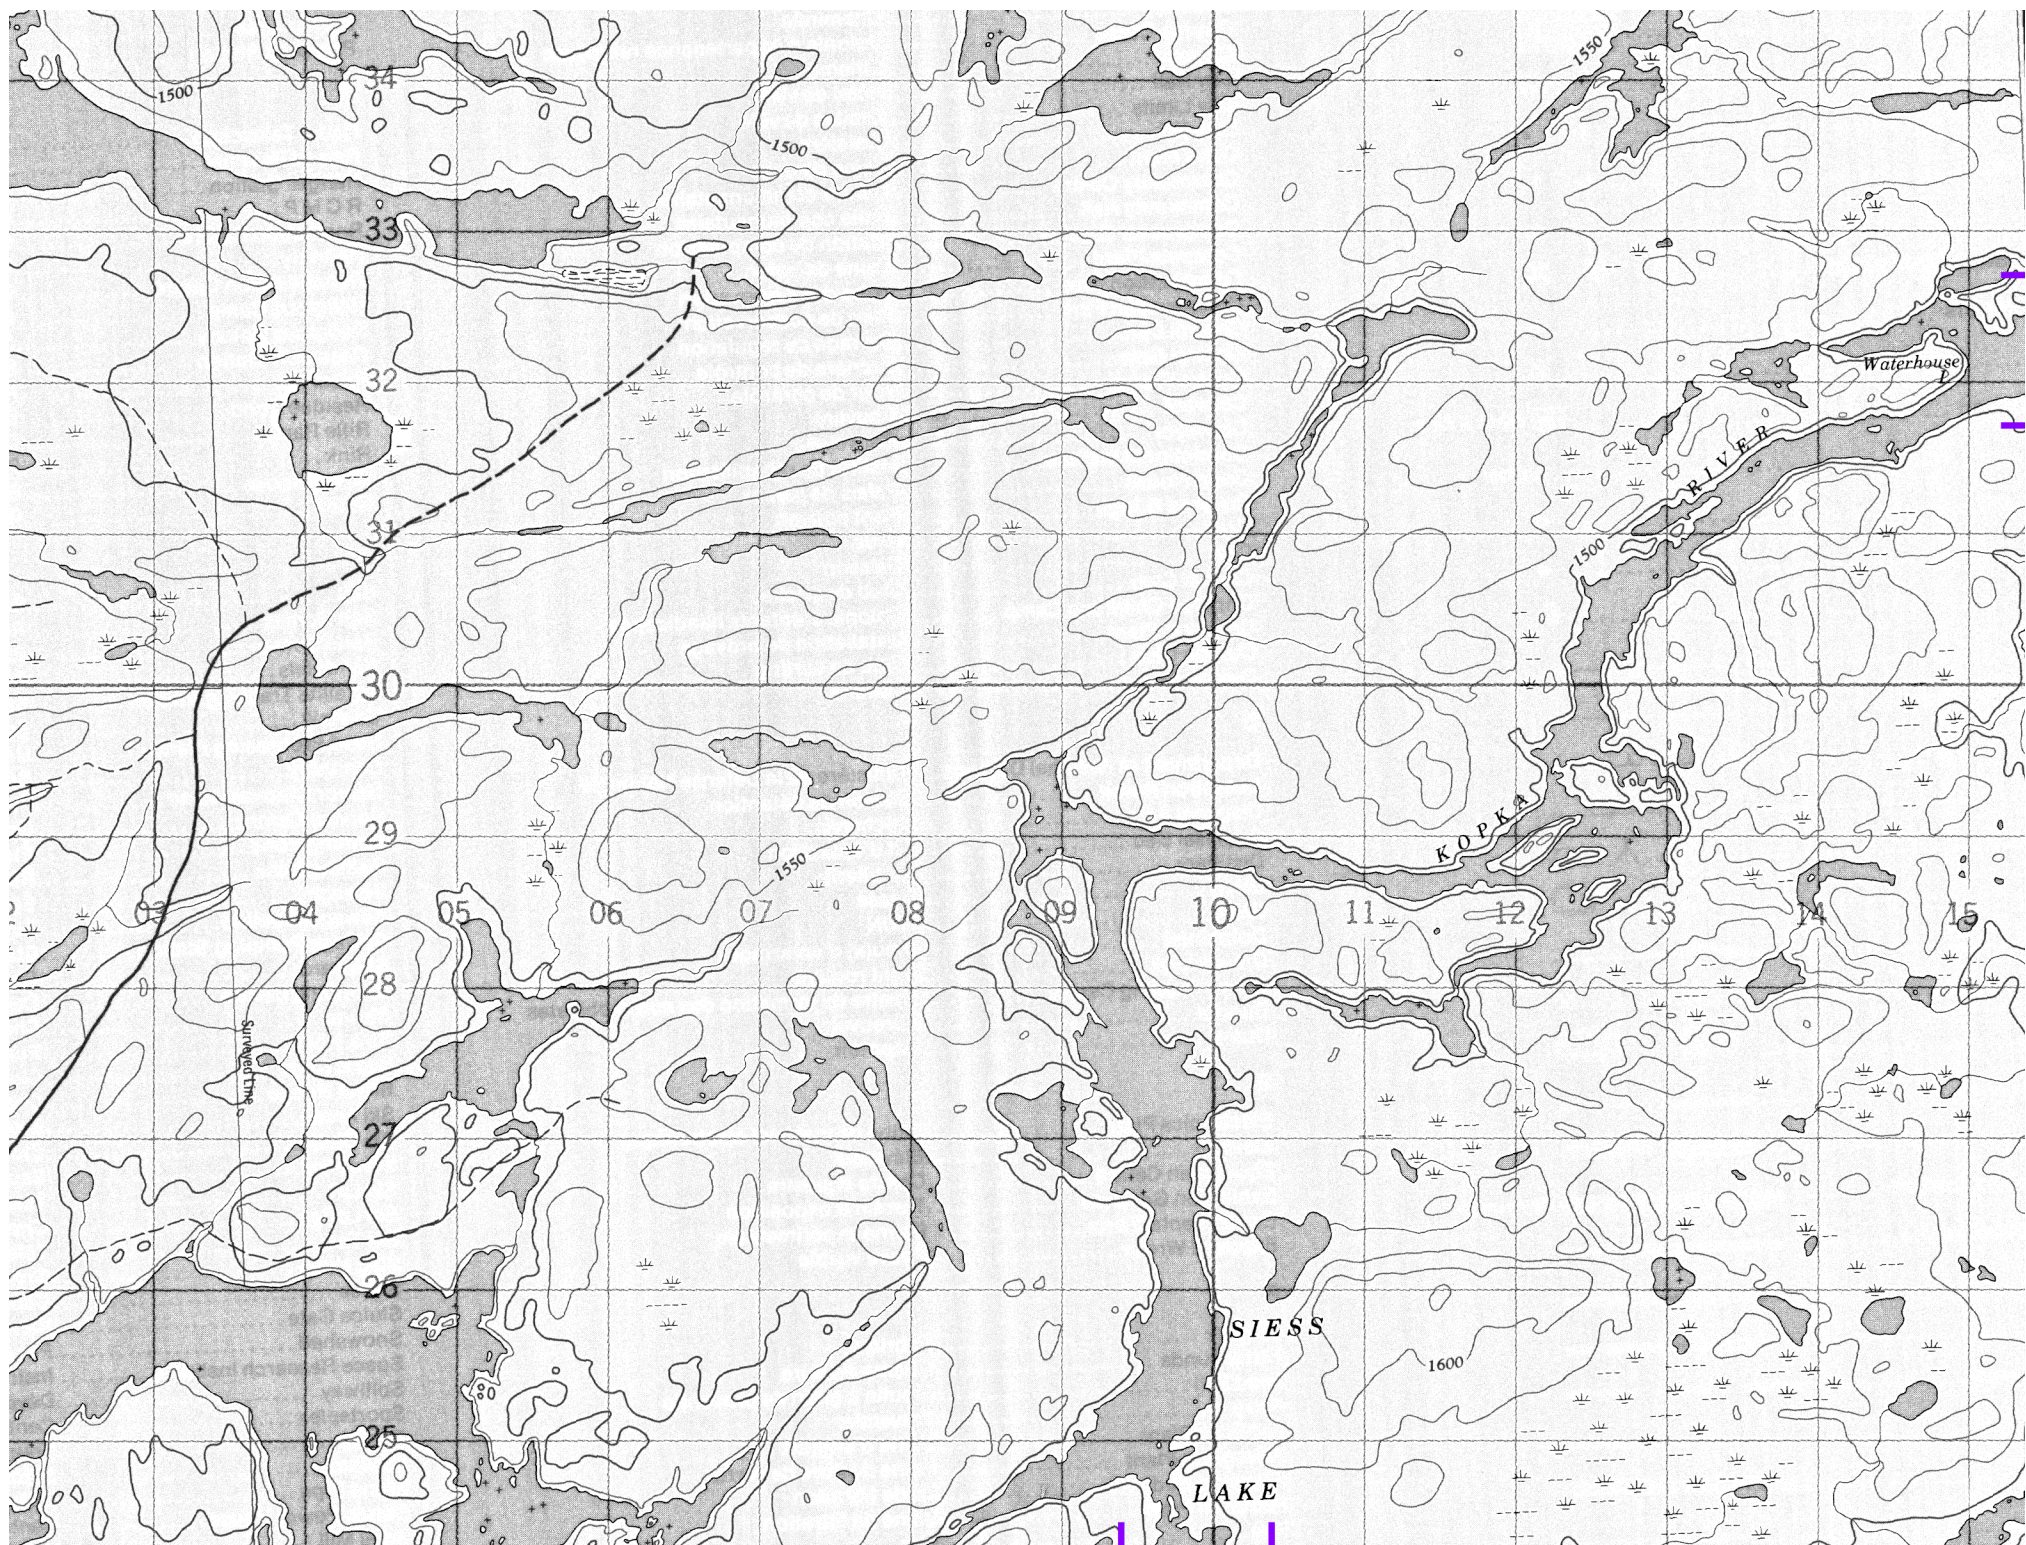

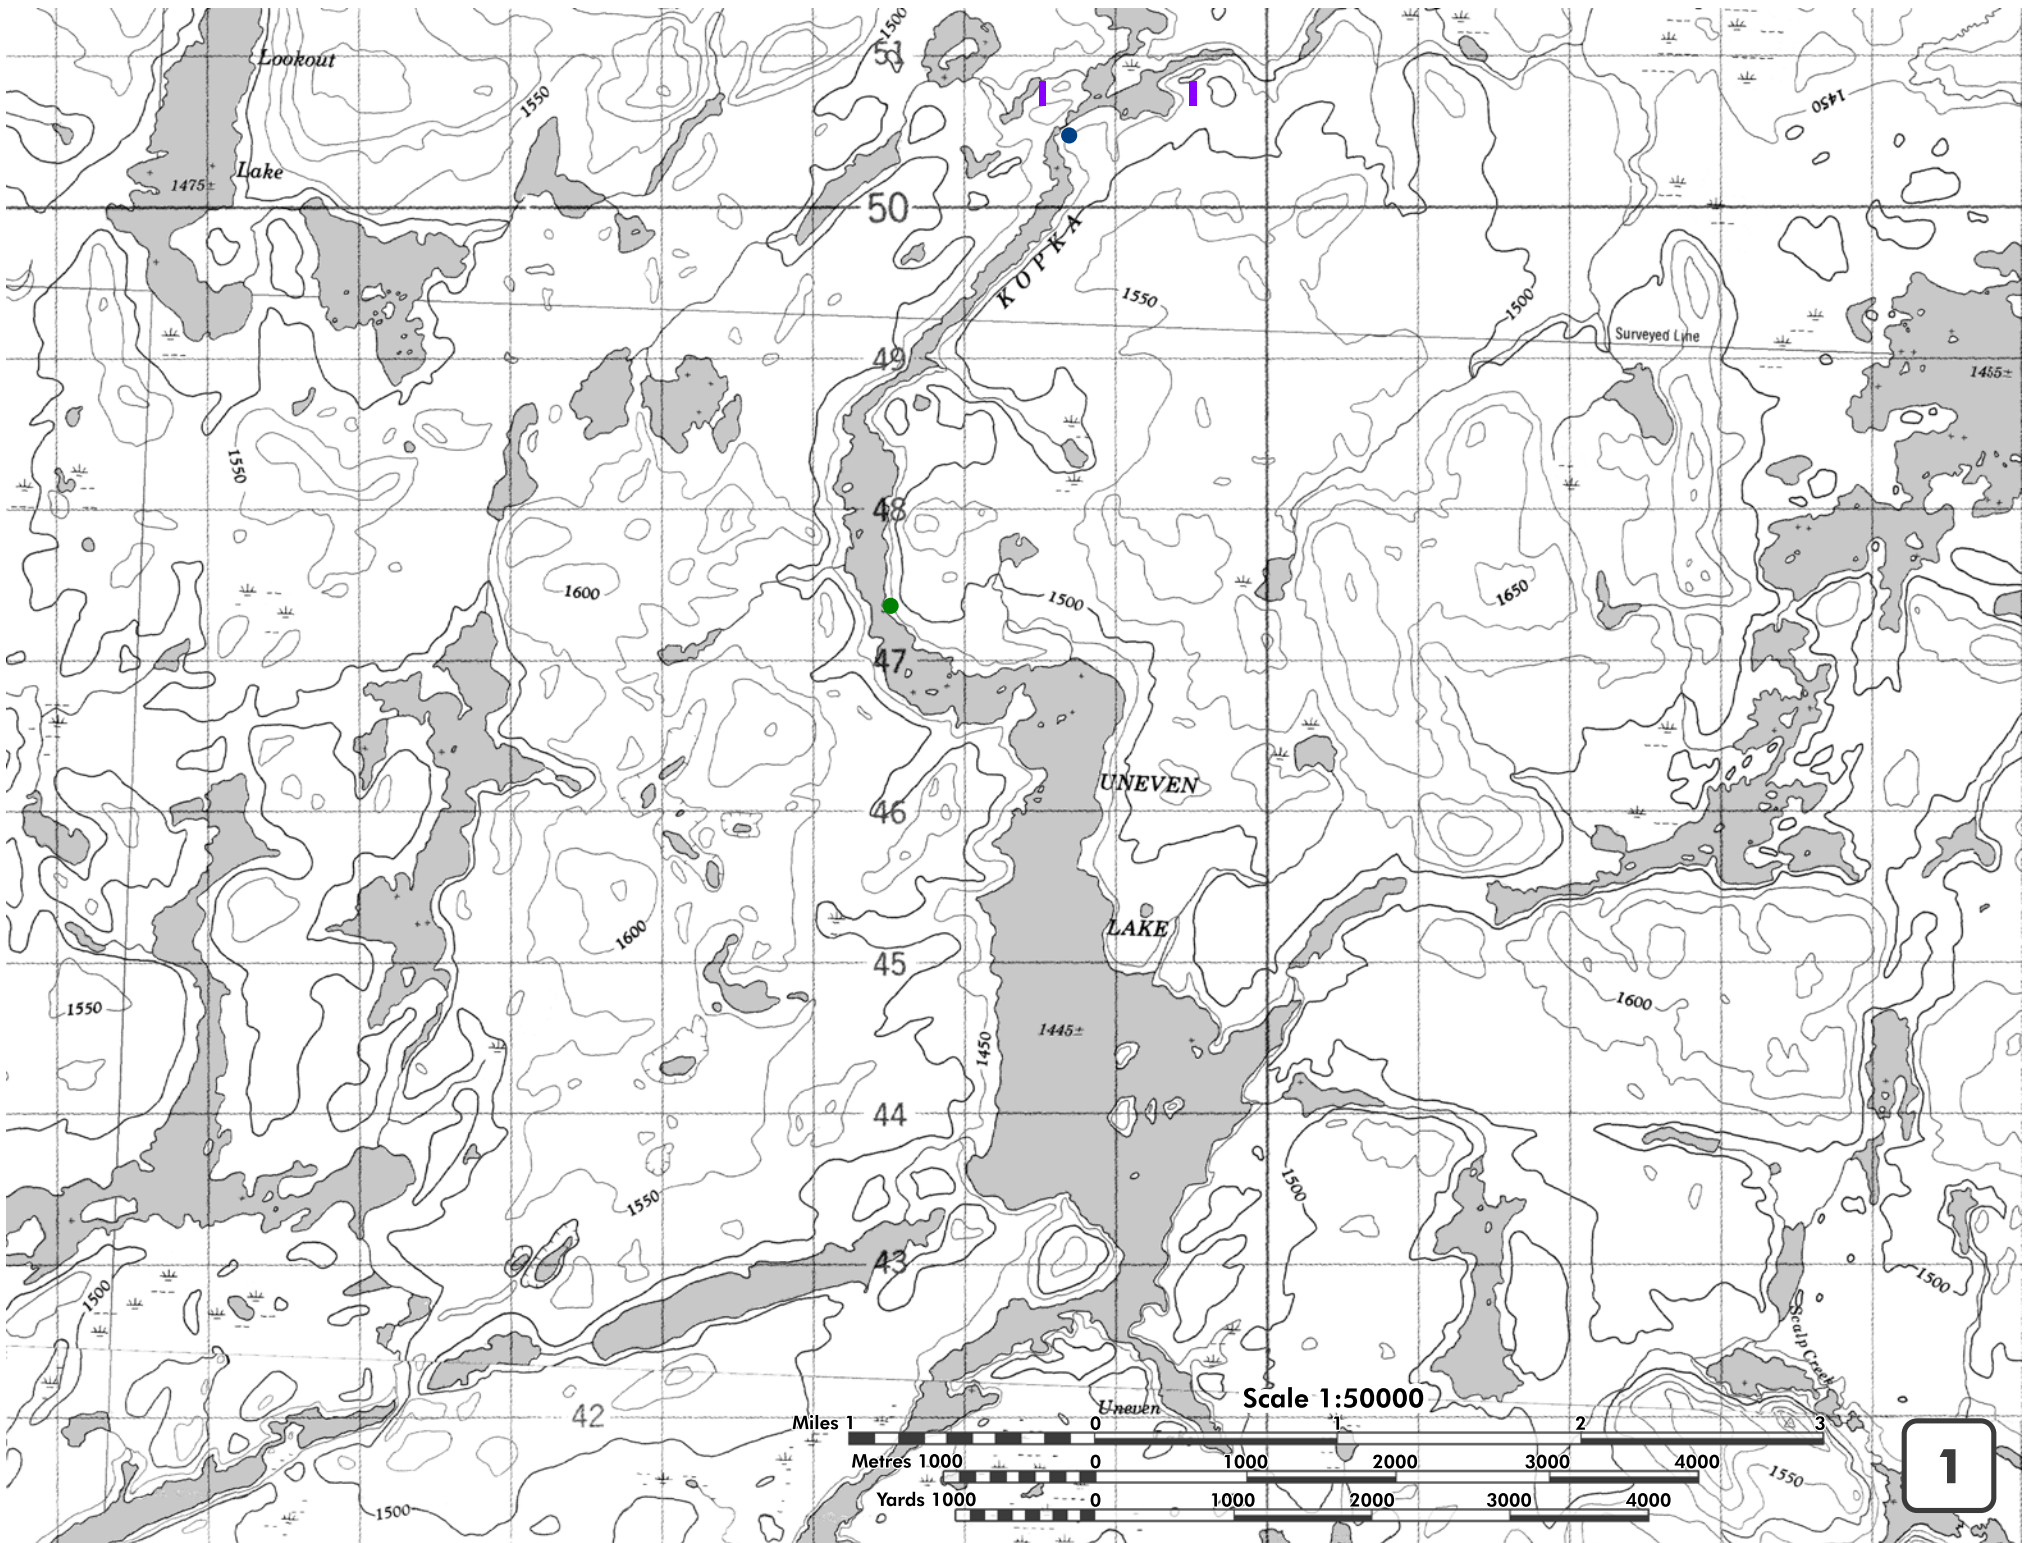

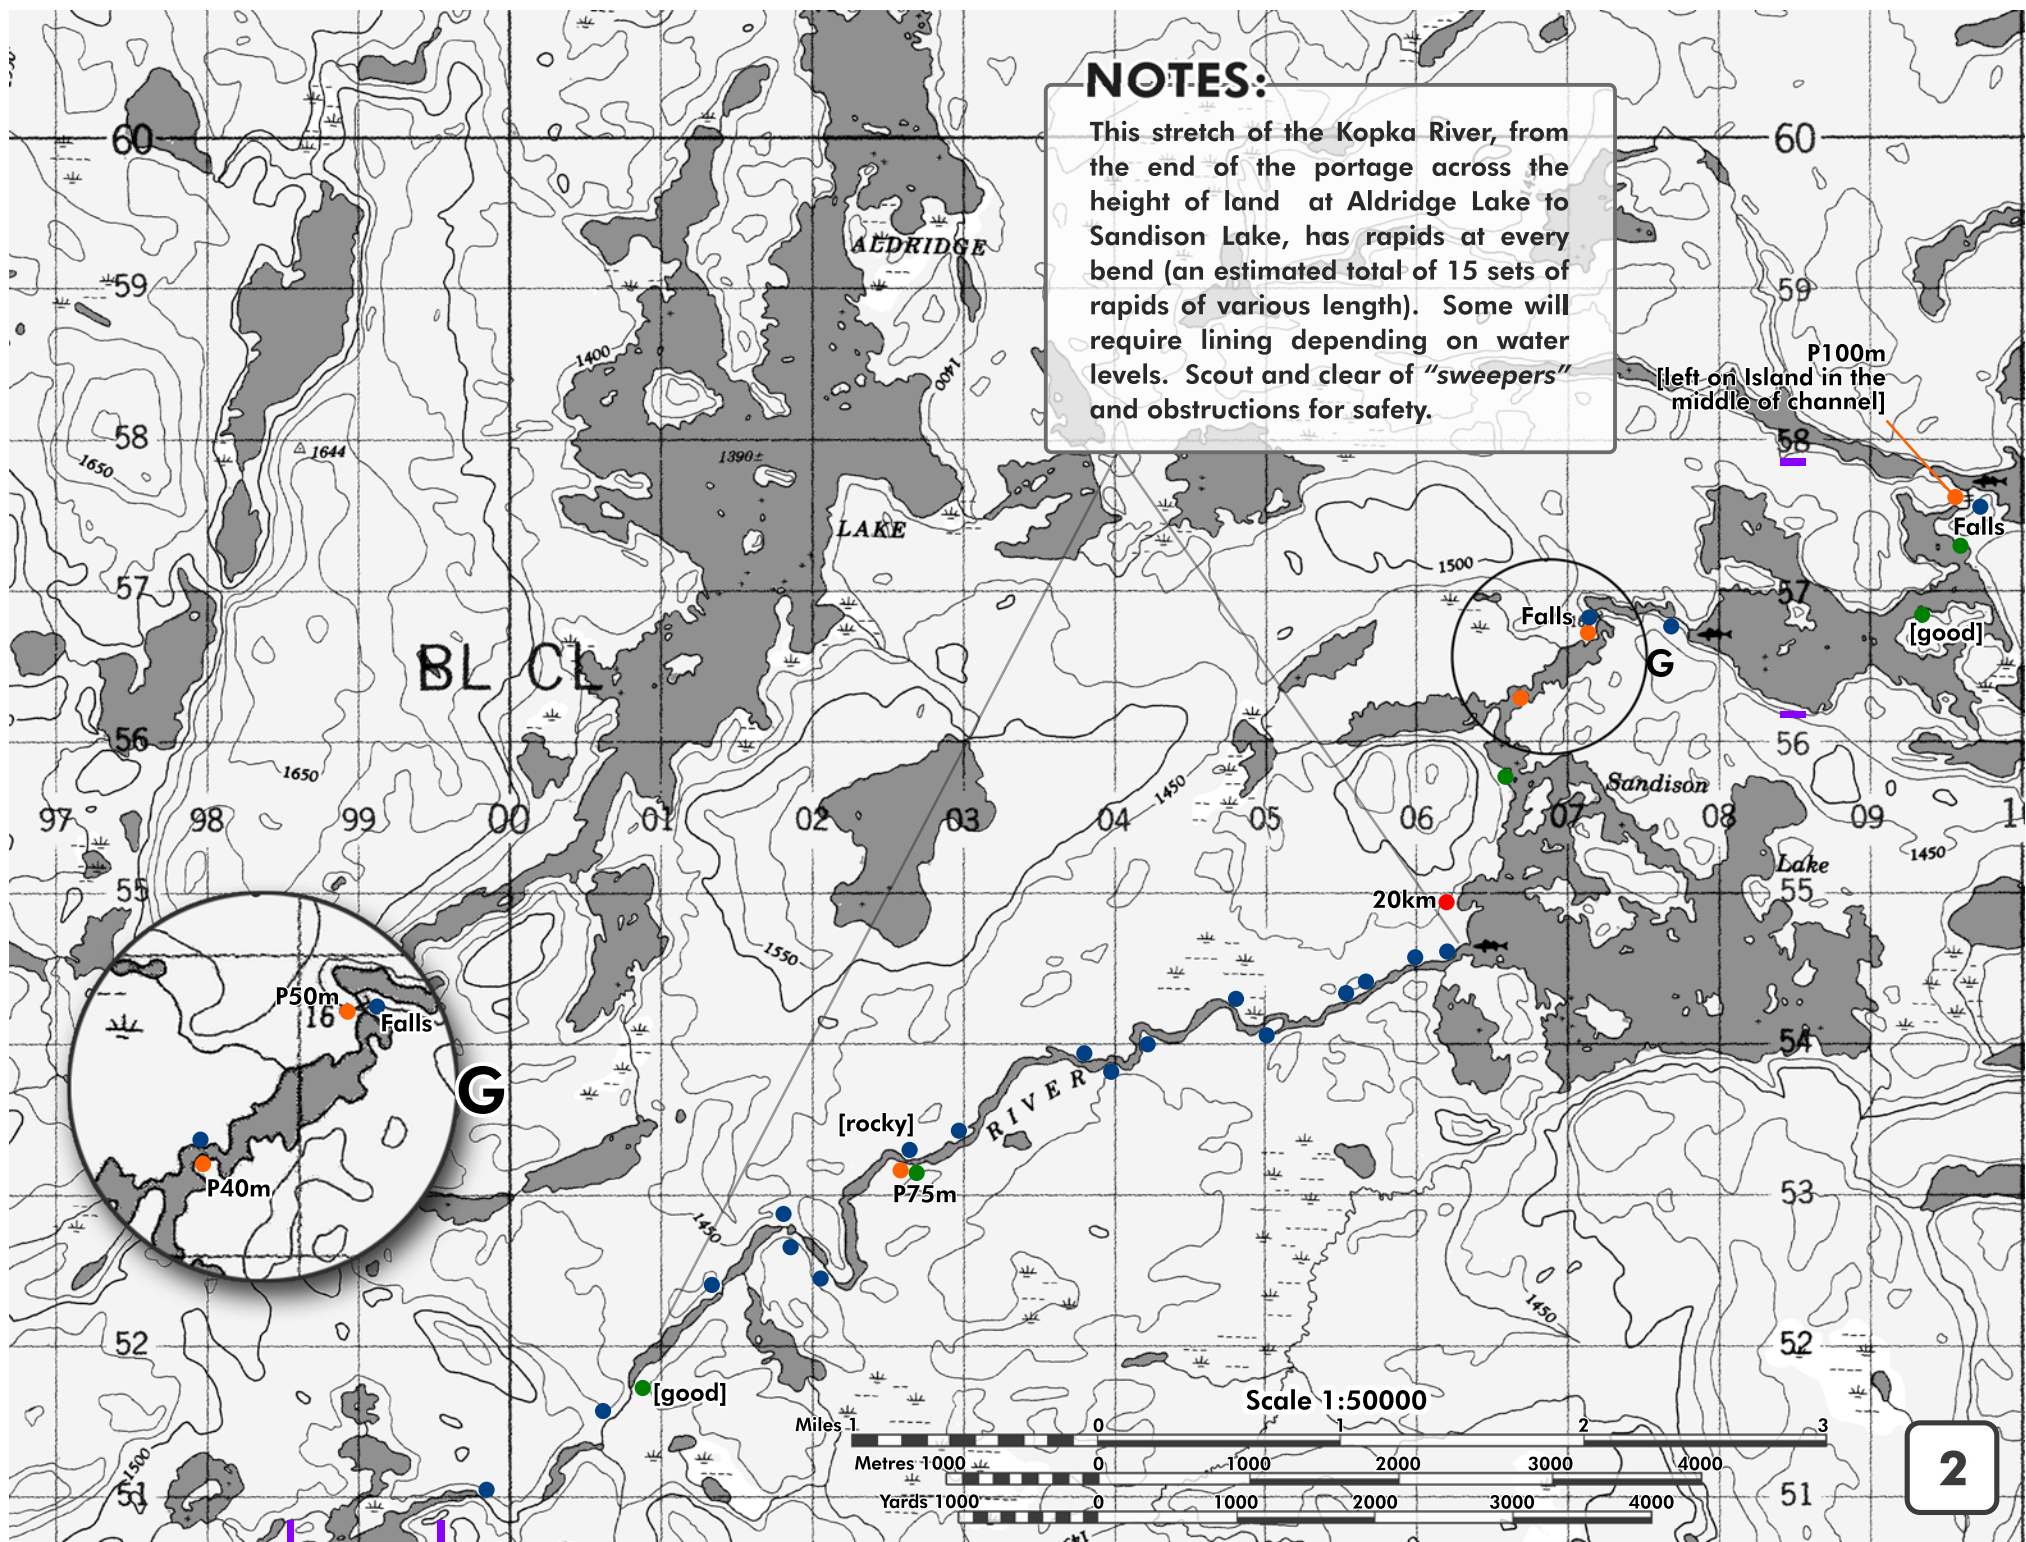

NOTE: Kashishibog River flows into Sparkling Lake

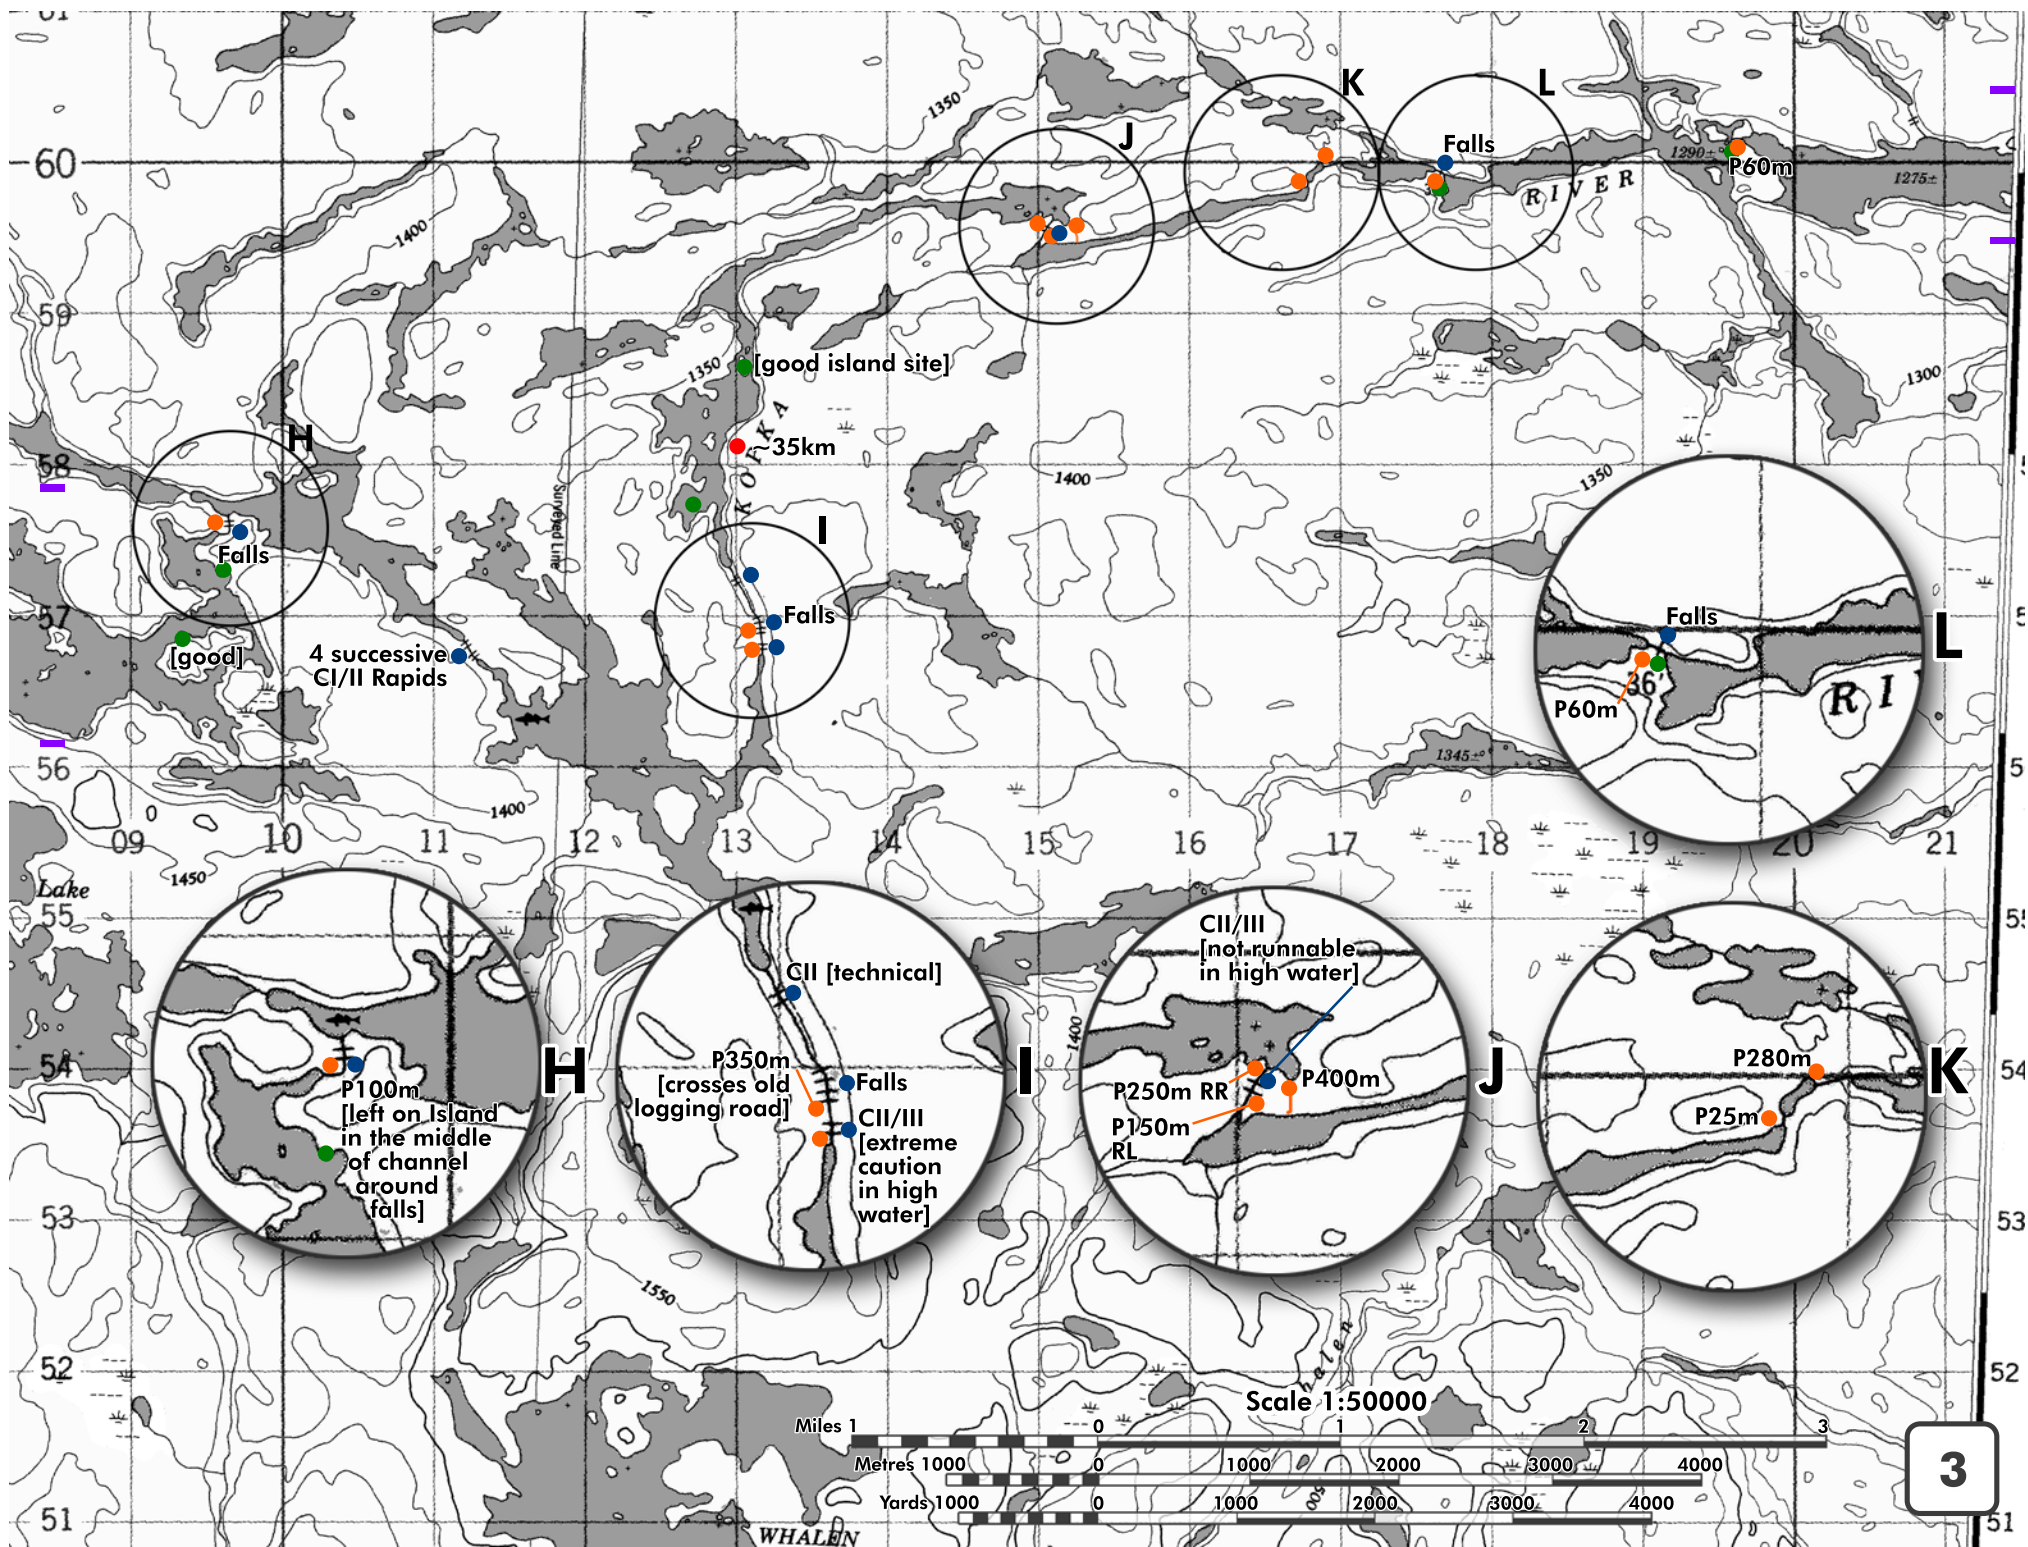

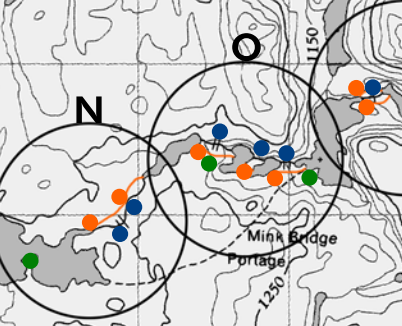

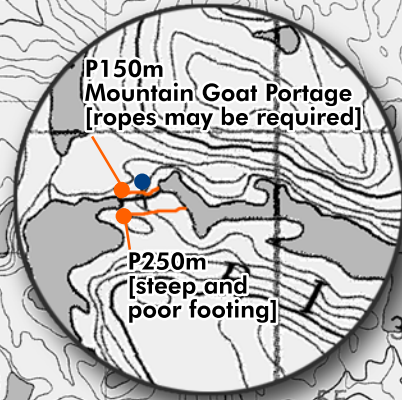

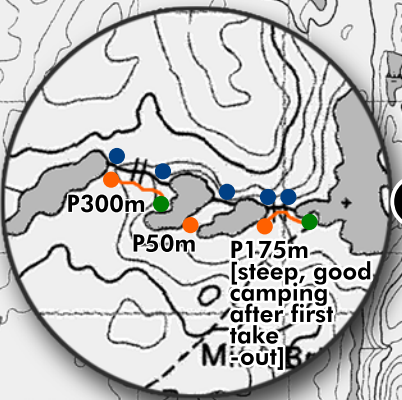

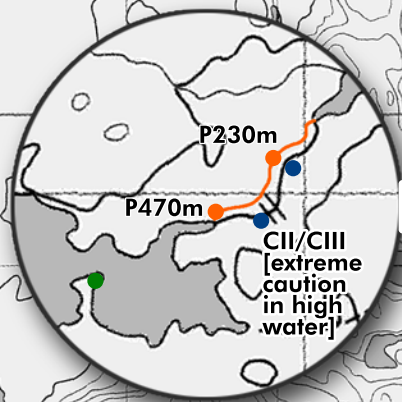

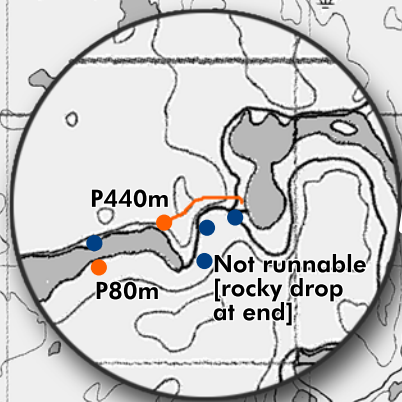

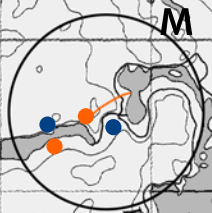

This stretch of the Kopka River, from the end of the portage across the height of land at Aldridge Lake to Sandison Lake, has rapids at every bend (an estimated total of 15 sets of rapids of various length). Some will require lining depending on water levels. Scout and clear of "sweepers" and obstructions for safety.

NOTES:

Known as the "Seven Sisters", the canyon portion of the route (N,O,P) is made up of gruelling portages (poor footing and steep inclination or declination) that avoid a series of 7 severe drops in elevation. The elevation change is approximately 250 ft, and it is worth noting that the historic Mink Bridge Portage no longer exists.
